PrintEZ™

TriBeam's patent-pending PrintEZ™ technology provides fast, easy printing from your palmOne™ handheld.

Print to the same printer as your desktop	✓ The printer that your desktop prints to is the printer that your handheld prints to. ✓ With PrintEZ you don't need special printers.
Print to any type of printer	✓ PrintEZ is not limited to certain brands or models of printer. ✓ If your desktop can print to it, so can your handheld! ✓ Printers with many different desktop interfaces may be used including parallel ports, USB ports, Firewire, network printers with Ethernet connections, or wireless printers with WiFi or Bluetooth.
Choose the printer from you handheld	✓ Select any printer your desktop can print to from your handheld. ✓ Or simply print to the desktop default printer.
PrintEZ uses the print drivers on your desktop computer.	✓ No print drivers on the handheld to hassle with. ✓ Saves memory on the handheld. ✓ No need to worry about which print drivers to install on the handheld. ✓ Uses fully functional desktop print drivers.
Small Program size	✓ PrintEZ is one small application on the handheld. ✓ It's easy to load and doesn't add a bunch of clutter to the handheld.
Network printing	✓ Print to any printer on the network. ✓ Since PrintEZ uses the same printers as your desktop, you can print to any printer on the network that your desktop can access, even a printer in a different room!
Open Function	✓ Open files from any PrintEZ category with one tap.
Web Page Printing	✓ Print web pages from your Palm. ✓ TriBeam's Patent Pending Technology makes printing web pages fast and easy. ✓ Print from a list of saved bookmarks or from a URL. ✓ Web pages printed just like printing from your desktop.
Pictures	✓ Send your favorite pictures to the printer. ✓ Want to print them in color? No problem, if your desktop prints to a color printer, so does your handheld!

What goes on your desktop computer?

The PrintEZ installer adds a small utility program to your desktop computer that looks for print jobs sent from your palmOne handheld. When you submit a file for printing, the desktop PrintEZ utility automatically queues them to the printer. It operates quietly in the background; all you'll see is the tray icon in the lower right of your desktop.

Choose the printer from your handheld!

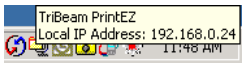
Compatibility Requirements	Windows 2000, XP & NT	MAC OSX 10.3+
Word docs	Microsoft Word™	-
Excel Spreadsheets	Microsoft Excel™	-
Memo pad, Contacts	Microsoft Word™	-
Web sites	Internet Explorer™	Safari™

Choose your wireless

All handhelds have IrDA.

If you have IrDA built into your computer or you're using a USB-IrDA adapter, you're all set.
If you don't have an IrDA adapter, get the PrintEZ kit.

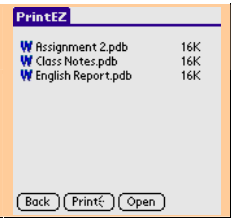
You can also use PrintEZ with palmOne handhelds that have Wi-Fi or Bluetooth capability.
Just enter your desktop address that PrintEZ provides.



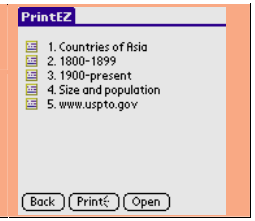
Choose your file

Print from your handheld

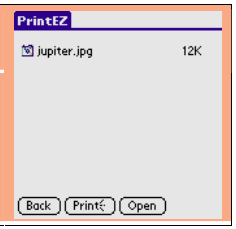
Print Word documents created or stored on the handheld with Documents To Go™. Word documents need to be stored in native Microsoft Word format.



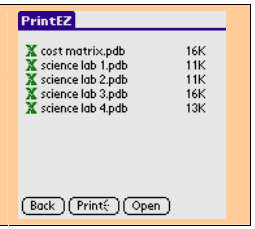
Print Memos (text files) from the Memo Pad application.



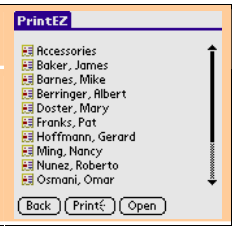
Images (JPG, GIF, BMP) from PalmOne Media viewer or AcidImage from Red Mercury.



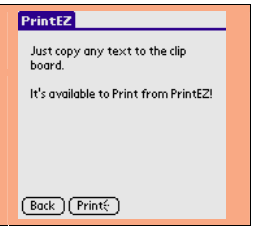
Spread sheets created or stored on the handheld with Documents To Go™. Spread sheets need to be stored in native Microsoft Excel format.



Complete contact information from the handheld Contacts address book.



Any text copied to the clip board can be printed.



Web pages bookmarked from popular handheld browsers such as Web, Web Pro and Blazer can be printed.

Copy a URL to the clipboard and you can print web pages this way too!

Maps, directions, news, weather, sports, …

Print Documents From Your Handheld

Choose Printer from Your Handheld

Works with All Printers!

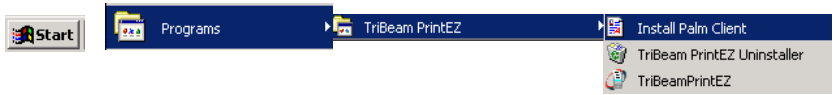
TriBeam's patent-pending PrintEZ™ technology provides a fast, easy way to print files using your palmOne™ handheld and works with any printer connected to your desktop computer, and you can select the printer from your handheld. PrintEZ can print Word documents, Excel documents, Memo Pad items, Contacts, pictures, Web Pages and text copied to the clip board. Word and Excel documents need to be in Documents To Go™ native format. PrintEZ is currently compatible with Windows® 2000, XP and NT and Macintosh® OSX 10.3 and higher.

Because PrintEZ prints through your desktop computer, it works with any printer that your desktop can print to. You don't have to select and install numerous print drivers on your handheld, nor do you need to choose the proper print driver for a particular printer. When you submit a file for printing, the printer selected as the default printer for your desktop computer is used. The desktop PrintEZ utility looks for print jobs sent from your palmOne handheld and automatically queues them to the printer, so be sure to keep it running. It operates quietly in the background; all you'll see is the tray icon in the lower right of your desktop.

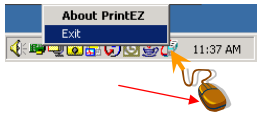
Install the PrintEZ Desktop Utility Download the installation program and double-click or insert the mini-CD; installation should start automatically. If it doesn't, go to *My Computer* and double click the PrintEZ CD. Select the recommended defaults by clicking *next*. If you purchased a PrintEZ kit with the USB-IrDA adapter, don't plug it into your computer until instructed during the PrintEZ install process. Follow the instructions to install the USB-IrDA driver before starting PrintEZ. Print the test web-page when prompted. If your anti-virus software prompts you, enable the PrintEZ script. The PrintEZ desktop utility must be running to print files from your palmOne handheld. Look for the PrintEZ icon in the icon tray on the right side of the task bar at the bottom of you desktop.

Install the Handheld PrintEZ Application

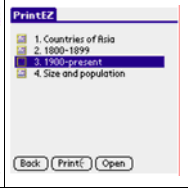
HotSync® or beam the PrintEZ program to your handheld. The Palm OS® application is in the folder where you installed PrintEZ. The default is *TriBeamPrintEZ* in the *Program Files* folder. You can also install it from the start menu.

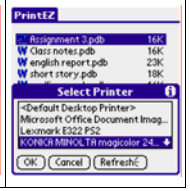


Using PrintEZ If you have IrDA built into your computer or you're using a USB-IrDA adapter connected to your desktop computer, you're all set. The USB-IrDA adapter usually comes with a driver that needs to be installed so be sure you've done that if you want to beam files for printing. The driver must be installed on your desktop computer before running PrintEZ. If PrintEZ was already running, just exit (right-click the tray icon and click exit) and restart PrintEZ.



Start PrintEZ on your handheld and enter your Registration Key or Try the Demo. The key is generated using your handheld HotSync name. The Demo allows you to print ten times before you need to register. Choose the type of file you want to print, choose the file and tap print. It's that easy. If you're using beaming, be sure to point your handheld at the Infrared adapter.

Enter your registration key or try the demo.	Choose the type of file you want to print.	Select the file and tap Print. You may also Open the file.	Print to the currently selected printer or choose a new printer.	
				




You can also use PrintEZ with palmOne handhelds that have 802.11 Wi-Fi or Bluetooth capability. In the PrintEZ program, you just need to enter the IP address of the desktop computer running the PrintEZ desktop program. For networked wireless follow the instructions below.

Hover your mouse pointer over the system tray icon to see the IP address of the desktop.	
Tap the menu button and select Access Method. Tap the wireless button, and enter the IP address of the desktop computer. Don't change the Port number (10651).
